# The Shortest Distance Between You And Your New Product: How Innovators Use Rapid Learning Cycles To Get Their Best Ideas To Market Faster

## Synopsis

Rapid Learning Cycles will help you find the shortest distance between you and a new product that your customers can buy. When you can get that product into customers' hands faster, you see your vision brought to life sooner. You can beat any competition to market with your best ideas. You can shorten the time it takes before your company begins to earn money from your ideas. You can reduce development costs, making it easier for investors, executive teams and program sponsors to buy into your ideas. If your idea is meant to fail, it will fail faster, freeing you up to go on to your next idea. You can empower your teams to learn faster and keep their options open as long as possible with Rapid Learning Cycles. When they have a framework that supports rapid learning, they can develop products that win in the market by delivering maximum customer and business value. There is no "cookbook" method or standard process to go from idea to product launch that works, in established R & D or entrepreneurship. Over the years, a lot of people have tried to create one, with varying degrees of success. All of them work well in some situations, but not so well in others. Every innovation needs to overcome specific challenges, but the challenges are never the same. Rapid Learning Cycles builds on the best ideas from Agile Development and Lean Startup to provide a framework to help you overcome your specific obstacles. Instead of creating detailed plans that get instantly out of date, teams work in short cycles of learning that help them thrive in extreme uncertainty. Instead of locking down decisions and then being forced to live with them, teams pull learning forward and push decisions later to maintain flexibility and remove obstacles before they appear. Instead of wasting time and money on product builds that don't work, teams leverage modeling, rapid prototyping and other experimental methods to accelerate the learning they need to make good decisions that stick. For the past ten years, Radeka has worked with leading innovation teams in consumer products, office furniture, biotechnology, pharma, electronics and medical devices to hone this framework into a proven method for getting your new products to market faster.

## Book Information

## Customer Reviews

A brilliant synthesis of Lean principles with practical techniques borrowed from agile software. The author presents a well-tested and adaptable framework for managing the thousand-and-one unknowns in new product development in a way which significantly accelerates progress. The methods are described clearly with plenty of illustrations. If you're managing large technical development projects, you'll find this book invaluable.

Comprehensive & practical guide to implement knowledge based or lean product development. Easy to read and a must for everybody involved in improving product development. A big plus is that this book helps translating what is written about car manufacturers with huge development teams like Toyota to something useable for small and mid-size companies.

The only source for learning how to use Rapid Learning Cycles. This will become a Lean PD classic.
