Customer Reviews

The authors describe a Development Dimensions International approach to leadership development called "acceleration pools." Their book "is designed to help you understand and implement systems that will identify talent and develop the high-potential people your organization needs to grow and prosper." (p. vii). This is the preferred alternative to the revolving door of expensive executives hired from outside to effect miraculous change. The book makes its case for acceleration pools in five sections. The first section argues that organizations should develop their internal leadership "bench strength" and suggests how to identify high potential leaders and provide them with growth

opportunities. The argument is strengthened by several cases studies and identification of organizational culture factors that contribute to the success of acceleration pools. Part Two contains a single chapter with advice about identifying high potential participants. Most of this advice is in the form of general strategies for identifying participants, such as optimizing the size of the pool and considering morale effects of various inclusion and exclusion techniques. It would be a stronger if it included more about competencies and how to assess them accurately to select the best acceleration pool members. Part Three discusses how to diagnose the strengths and weaknesses--seen as developmental needs--of acceleration pool members. This section does discuss specific competencies and how to assess their mastery. There is also an insightful discussion of the "derailers," such as arrogance, avoidance, and perfectionism, that impede employee development. Part Four may be the book's most useful section. It describes specific strategies for developing leaders.
