Geography Coloring Book (3rd Edition)

Synopsis

This unique educational tool introduces learners to the countries of the world and the states of the United States. Through active participation, coloring the maps, users gain a broad understanding of the material and retain that understanding. Each section begins with a plate containing a political map, a physical map, and regional maps. World Thematic Maps consist of eleven global maps covering climate, rainfall, temperatures, prevailing winds, ocean currents, vegetation, land use, population, racial distribution, languages, and religions presenting a «global» view of human activity. Flags and Review of Nations groups flags of the world according to continents, with the illustration of the flag placed close to the country of origin. For children of all ages and their parents who could benefit from a colorful crash course or refresher in geography, and an enjoyable and informative guide to a greater understanding of the world around them.

Customer Reviews

This is an excellent coloring book! It has a wealth of information about all of the countries of the world. Although this was written for a 5th or 6th grade level, this coloring book could be appropriate for children as young as 4 or 5 to begin to introduce them to world geography. There are supplemental maps in the back of the book which are designed to help identify major empires throughout the ages (e.g. Ottoman Empire) which can be very helpful for students of history in addition to students of geography. The section containing country flags was also a great resource.

I first began using this text at Tompkins-Cortland Community College in 1992. Most of my students used the book in the two Geography class that were required in the AAS program for travel and Tourism. Since moving to North Carolina I still use it in the courses that I teach in the Raleigh area. Students find the text a joy to use and it helps with their understanding of the political and physical areas of the subject. Since most students do not have formal Geographic training it is one of the best tools that they have for self study. Many use the text in the travel industry after they enter the job market. The price is also very affordable. Just a great book. I have at least four myself. Even my wife the Geography hater loves this publication.

My oldest son used this book in his 9th grade honors history class. At the time I thought that was odd, to have an honors student coloring. However, with all the budget cuts with schools, they have dropped History for 9th graders, which means no more Geography in high school. I have 2 daughters that are home schooled in 8th grade and I ordered this book so they could learn where the countries are. My son, that used this book, really knows his Geography well. I have just started with my girls on this book and it's awesome. They are learning countries they have never heard of, along with knowing where the countries are that they have heard of. It's very helpful to color the names of the country, then outline it, color it in, and read about it. I highly recommend this book. I am really enjoying learning the countries as well. There are plenty of places that I have heard of but can't quite place where they are exactly and this book is a fun way to figure that out.

I got this to supplement our homeschooling geography and history studies. As with the wonderful Anatomy Coloring Book, everything is laid out and labeled beautifully. I also appreciated the guide at the beginning of the book that helps the user get the most out of the book. Countries are organized well, and the inclusion of maps of weather patterns, ocean currents, racial and religious distribution, flags, and so much more means that we will make heavy use of this book for years to come. My only two quibbles are that the paper in this, the 3rd edition, could still be improved (I would gladly pony up a couple of dollars more for sturdy, thick pages), and that I wish it was available on CD-ROM. If I could print my own pages, I could bypass the book's quality issue and could also use it with more than one child. Otherwise, this is a wonderful resource and I recommend it highly.

I took a geography course about a year ago at Florida State University that required this book. The class and professor were very challenging (especially for an entry level course), and this book really

helped me visually place my thoughts. I guess it also helps that I enjoy coloring and find it to be a stress-reliever in college. I think being able to color in the maps at your own preference, but still with the great organization that the book lays it out in for the reader really makes this book an excellent choice for anyone trying to better understand geography of all sorts.

I have taught geography for more than ten years and this is a fun and useful way to introduce new countries as well as concepts like place, direction and distance. I also recommend a great book for teachers and parents to read called Geographical Literacy. Incredible new ideas for teaching kids the rudiments of geography. Check it out at .

This is a great way to learn world geography. By coloring and reading about the country, state, river, mountain range, or territory, we learn in many ways at once. It stays with you. There's the visual, the kinetic, and auditory learning, if read outloud, like we do with my jr. high daughter. It's challenging for her, but she's getting it. As a homeschooling tool it can't be beat. It's great for adults, too!

The second edition of "The Geography Coloring Book" suffers from the use of a slicker kind of paper that does not color well with Berol Prismacolor pencils. The paper also has a tendency to roll up at the edges with use. The publishers should consider reprinting the excellent edition on a paper more suitable for its intended use. It is only for that reason that I gave it four rather than five stars.
