Bob Willard originally published The Sustainability Advantage: Seven Business Case Benefits of a Triple Bottom Line back in 2002. In 2012, his publisher, New Society Press, brought out an updated 10th Anniversary edition, and changed the title to The New Sustainability Advantage. Basically, Willard takes apart every conceivable factor in business economics and shows how greening the company (when done right) yields vast financial benefits for businesses large and small. In other words, the entire book is a validation of something I’ve been saying for years: business can profit strongly by going green. The book covers obvious and non-obvious savings and income possibilities in many areas, with entire chapters on revenue/market share, energy, waste, materials and water, employee productivity, HR expenses, and risk reduction; these are the seven benefits in the subtitle. The risk reduction chapter is particularly detailed—covering reputation damage (with five subcategories), cost spirals (six subcategories), compliance, and other areas. What’s a non-obvious saving? One example would be the cost of water embodied in the production of paper; it turns out to be an astonishing 60 liters per ream (page 88). I certainly didn’t know that! Willard uses a mixture of real-world examples and two hypothetical companies, one quite large and the other much smaller—and uses very conservative projections for both. For the smaller company, with $1 mm annual revenue, the profit boost tips the scale at 51 percent. 51 percent growth in profit—“that is, income minus costs”—is not too shabby. But the large company, with revenues of $500 mm per year, showed a truly astonishing 81% net increase.
