Exploring Microsoft Office Access 2016 Comprehensive (Exploring For Office 2016 Series)
Synopsis

This book offers full, comprehensive coverage of Microsoft Access. Beyond point-and-click The goal of the Exploring series is to move students beyond the point-and-click, to understanding the why and how behind each skill. And because so much learning takes place outside of the classroom, this series provides learning tools that students can access anywhere, anytime.

Students go to college now with a different set of skills than they did years ago. With this in mind, the Exploring series seeks to move students beyond the basics of the software at a faster pace, without sacrificing coverage of the fundamental skills that everyone needs to know. Also available with MyITLab  MyITLab® is an online homework, tutorial, and assessment program designed for Information Technology (IT) courses, which engages students and improves results. HTML5 Simulation exercises and Live-in-Application Grader projects come with the convenience of auto-grading and instant feedback, helping students learn more quickly and effectively. Digital badges lets students showcase their Microsoft Office or Computer Concepts competencies, keeping them motivated and focused on their future careers. MyITLab builds the critical skills needed for college and career success. Note: You are purchasing a standalone product; MyITLab does not come packaged with this content. I use this book as a textbook in a course I teach every couple of years. I don't get to pick the textbook, but this one isn't too bad. We have to teach Microsoft Access in this course because of local campus issues. Most Access books are too focused on Microsoft Access and neglect larger database issues. This book does fall into those traps at times, but I am giving it 4 stars because it is not quite as bad as others on those points. As a textbook it has 10 chapters. In some ways this is the absolute worst number of possible chapters. It does not fit nicely into a 14 or 15 week semester. This fall I am planning to cover the book in the first 11 weeks (including tests). The book ends with one anemic section on SQL. I am planning on doing another week on SQL. I am thinking of doing a week with a non-Access database like postgresql or mysql. Then doing a final week talking about nosql and big data.
